Not illustrated. 1916 Excerpt: .and want to make the statement that my paper refers to the construction of engines of approximately the same displacement as the Packard engine under consideration. I have not undertaken to state how far it would pay to sub-divide a six, or what the best design is from an all-round practical point of view for a small type engine. I think it would be just as foolish to say that we should have all twelve-cylinder engines as it would be to say that we should have all four-cylinder. Each has advantages in its own particular field. I have no quarrel with any one type. I think they may all have their place. WOOD MODELS USED IN DESIGNING I have worked out what I call the wood model route. When you have a new engine under consideration it is hard to see on the drawing-board from all angles. In the case of the twelve, we built a number of wood models. A good pattern-maker can whittle out and set up a model of an engine, and as far as outward appearance is concerned, it will look like the real thing. By placing the model in a frame I was able to study and locate the equipment in various positions. Different designers have different standards as to the width of the frame, distance from the top of the frame to the center of the crankshaft, etc. Most of us dislike to change center lines when it can be...
